1. Campaign Work Done

The team carried out five pieces of work to spread awareness about e-waste and to understand what the public thinks about it.

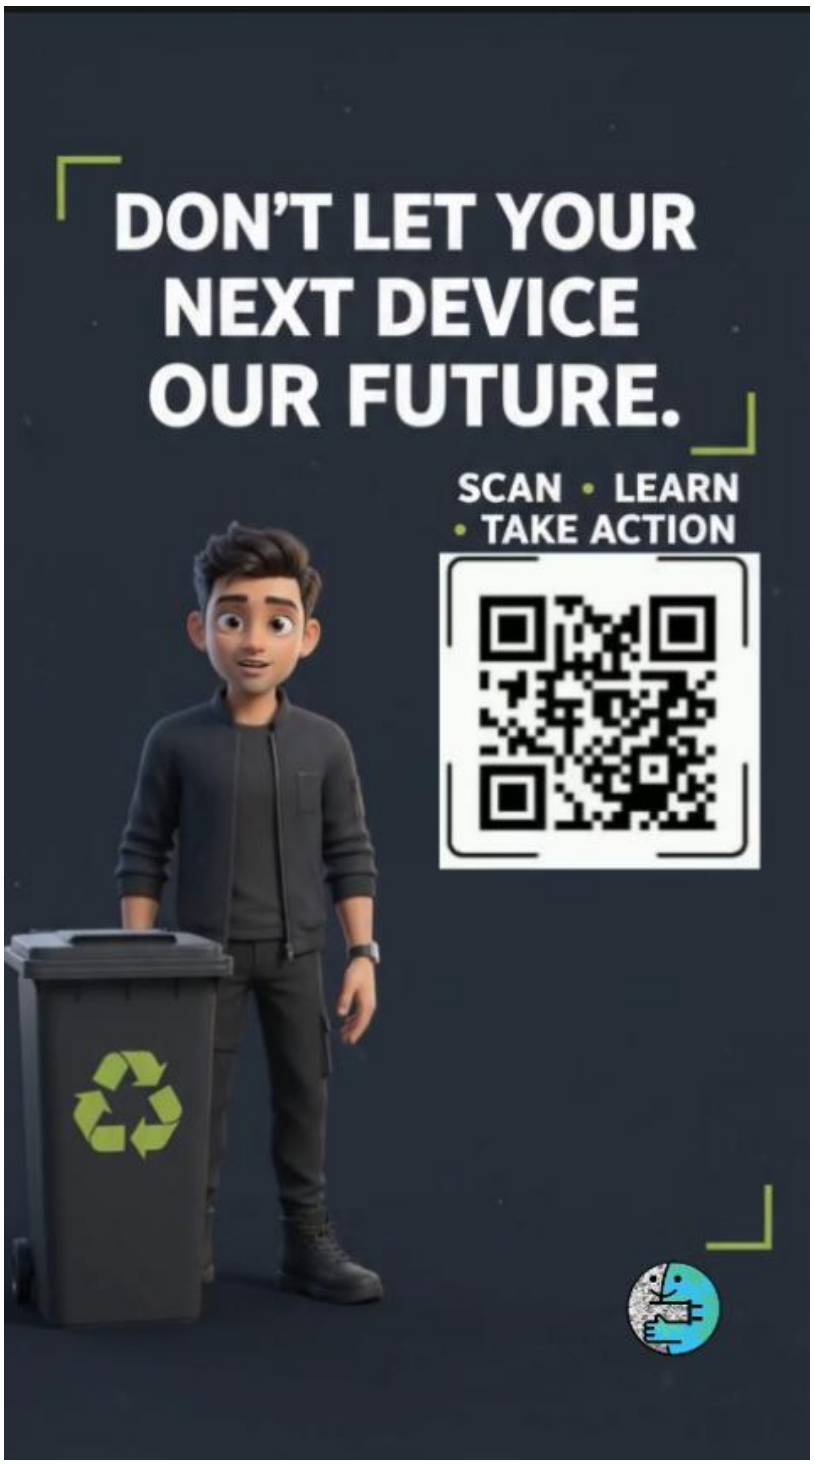

1.1 EcoCycle Dashboard and Quiz

We created an online dashboard where anyone can test their e-waste knowledge. Visitors drag 10 items into the correct recycling bins and then answer an 8-question quiz. Those who score 70% or more earn their own E-Waste Champion certificate, and scores are shown on a live leaderboard so top scorers get recognition. The dashboard also helps visitors find the nearest drop-off points for old chargers, phones, cables and dead batteries.

1.2 Awareness Reels

We made short awareness reels that teach people, in a simple and quick way, what e-waste is and why old gadgets should be recycled responsibly. The reels were shared on our Instagram page.

REEL LINK: https://www.instagram.com/reel/DeSChdVscm2/?obrf=emU1MjF0eGhnZG01

1.3 Social Media Posters with QR Codes

We designed the E-Waste Awareness Campaign poster, which explains the challenge in a few lines and carries a “Scan Here” QR code. Scanning the code takes people straight to the dashboard. The poster uses the messages “Don’t trash the future. Recycle your e-waste.”, “Recycle old electronics responsibly” and “Protect our planet from toxic waste.”

1.4 Instagram Campaign – @gadgets2green

We ran the campaign through our Instagram page, @gadgets2green, to share the reels and posters and to invite followers to try the dashboard quiz. The page also has its own QR card so people can find and follow it easily.

1.5 Public Opinion Collection and Analysis

Alongside the campaign, we collected opinions from the public to understand how aware people are about e-waste and how they usually dispose of old gadgets. The responses are analysed to see what people know and what habits they follow.

Number of responses: 78

Key findings:

- **Certificates issued: 49**
- **Average combined score: 75%**
- **Average attempts: 1.4 per participant**

2. Workflow

The diagram below shows how the campaign works from start to finish.

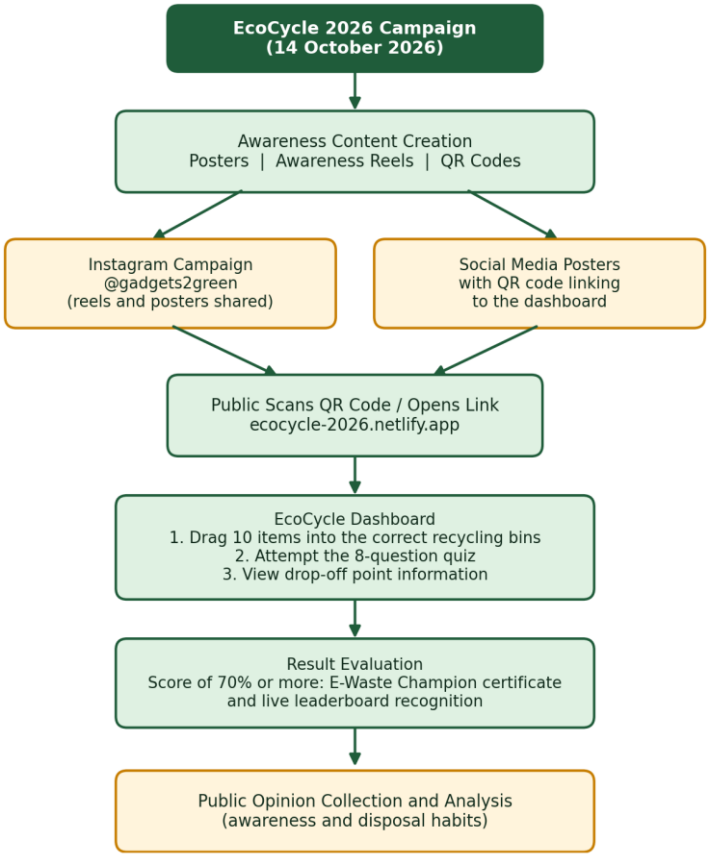

Figure 7: EcoCycle 2026 campaign workflow

In simple steps:

1. We create awareness content – posters, reels and QR codes.
2. The content is shared on Instagram (@gadgets2green) and as social media posters.
3. People scan the QR code or open the link to reach the dashboard.
4. On the dashboard, they sort 10 items into the right bins, take the 8-question quiz and find drop-off points.
5. Those scoring 70% or more receive an E-Waste Champion certificate and appear on the live leaderboard.
6. Public opinion on awareness and disposal habits is collected and analysed.

Conclusion: The dashboard provides a quick overview of participant performance, certification progress, and leaderboard rankings, helping organizers monitor results and manage the competition efficiently.
